Education

R.M.K COLLEGE OF ENGINEERING AND TECHNOLOGY |
2023 - 2027
B-Tech Artificial Intelligence And Data Science.
CGPA : 8.25

ANNA ADARSH MAT.HR.SCHOOL | 2022 - 2023
HSC | Computer Science with Math | 85.33%

Experience

MACHINE LEARNING INTERN | CORIZO

FEB 2024 - APR 2024

Built a stock price prediction model during the internship, gained hands-on experience in python & analytical skills.

STARTUP IDEATION INTERN | CED ANNA UNIVERSITY

May 2025 - Jun 2025

Built a deep learning-based deepfake detection system to identify AI-manipulated faces and prevent identity fraud.

Skills

- Python
- Java
- SQL
- Git & GitHub
- Postgre SQL
- Agentic AI
- Web developement
- Critical Thinking
- Project Management

Language

English
German
Tamil

SANGITHAA SRI K

Agentic AI Engineer

Innovative developer specializing in AI, deep learning, machine learning, and intelligent systems, with hands-on experience building real-world solutions. Developed impactful projects including Deepfake Detection, a Smart NCRP Complaint System for Tamil Nadu Police, Smart satellite optimization and CareFlow AI for healthcare workflow optimization. Proficient in full-stack development using Python, Java, Git, GitHub, and Supabase, with strong expertise in building agentic ai, model training, supervised learning, and predictive analytics. Adept at project management, collaboration, and delivering scalable tech solutions for real-world systems.

Certificates

Introduction to AI Concepts | Microsoft

Describe Cloud Computing | Microsoft

Oracle Certified Professional | Oracle

Backend Web Development | AWS

C++ Premier | Infosys

Introduction to MongoDB

International Conference | ICAICS Startup

Python for Data Science | NPTEL

Design Thinking | NPTEL

Projects

SMART NCRP COMPLAINT AUTOMATION SYSTEM | [View Project](#)

This system extract and consolidate cybercrime complaint data from CSV, Excel, and PDF files into a centralized database. Improved efficiency and reduced manual errors through automated data processing and structured data management.

CAREFLOW AI | [View Project](#)

This system is a predictive healthcare system that analyzes real-time patient data to assess risks and optimize hospital resource allocation proactively.

CAREFLOW SENTINAL | [View Project](#)

Developed an ML powered multi-hospital outbreak prediction system with PostgreSQL aggregation, heatmaps, and automated alerts.

SMART SATELLITE OPTIMIZATION | [View Project](#)

Smart Satellite Optimization is an AI-based system that improves satellite communication efficiency through intelligent data processing and resource management. It uses predictive analytics to reduce delays, enhance performance, and ensure reliable network operations.

FAKE INSURANCE CLAIM DETECTION SYSTEM | [View Project](#)

Developed a fraud detection system to identify fake hospital insurance claims using data analysis techniques.

DEEPPAKE FACE DETECTION SYSTEM | [View Project](#)

Deepfake Face Detection Model is an AI system that detects fake or manipulated faces in images and videos. It uses deep learning to identify inconsistencies and prevent identity fraud.

REAL-TIME CPU MONITORING | [View Project](#)

Developed a real-time Python dashboard to monitor CPU temperature, visualize live metrics, and trigger threshold-based alerts using a JSON API.

Hackathons

Technoverse | Agent Building challenge | Cognizant

CodeCraft'25 | Web application developement | Sri Sai Ram Engineering College

OOTY HACKATHON | Smart NCRP complaint systems| CSI Engineering college

Pragyan Hackathon | CareFlow AI | Kanini Software Solutions

IMPACT-AI-THON|CareFlow Sentinal | St. Josephs college of engineering

TNWISE 2026 HACKATHON | Smart satellite optomization | REC

SIH 2024 | Deep-fake face detection

SIH 2025 | Smart Student Hub
